

Important questions

1. Cloud economics
 2. Google App Engine
 3. IaaS, PaaS, SaaS
 4. MDCube using nine BCube containers
 5. Underprovisioning , Overprovisioning, Demand-driven provisioning, Event-driven provisioning, Popularity-driven provisioning with suitable examples
 6. VM security
 7. Trust options for centralized and distributed reputation systems.
 8. Cloud security and Trust management
 9. XOAR
 10. MapReduce Framework
 11. MapReduce data flow
-
- 1 Platform Evolution
 2. High Performance Computing [HPC] & HighThroughput Computing [HTC]
 3. Degrees of Parallelism
 4. Internet of Things & Cyber Physical Systems
 5. Multicore CPU and Many core GPUs, Multithreading Technology
 6. Virtual Machine
 7. Virtual Machine – Primitive Operations
 8. Major service models
 9. Privilege Levels or Domains
 10. Hypervisor- Xen Architecture
 11. Full Virtualization, Para-Virtualization
 12. Eucalyptus for virtual network
 13. CPU Virtualization, Memory Virtualization
 14. VM live Migration, VM-Based Intrusion Detection
